

The Solution for Legally Valid Elections: The Bedrock of American Liberty

The election process must protect the right of qualified citizens to choose their representatives through a secure process that ensures:

- 1 Real Security** *System must be secure.*
Systems must be tested and certified secure and compliant as required by law before voting can begin. Security must be maintained and tested throughout the entire process.
- 2 Real Voters** *Voters must be verified.*
Identity, citizenship and eligibility must be verified at registration to be allowed on the voter roll and at voting to be allowed to cast a ballot.
- 3 Real Votes** *Ballots must be secured.*
Authentic secret ballots, obtained without coercion, with guaranteed chain of custody proving origination from eligible voters, must be secure through entire process.
- 4 Real Counts** *Counts must be accurate.*
The number of votes counted must EQUAL the number of voters who voted. Critical infrastructure compliant systems and personnel must be used.
- 5 Real Proof** *Outcomes must be proven.*
Comprehensive records with complete transparency and valid end-to-end audits measured against defined accuracy threshold(s) must be maintained for every control point in the process.

US Supreme Court rulings since 1888 define any other election as illegal and void. Certification of an illegal election is criminal misconduct (18 U.S.C. § 241, 242).

Elections are a *process*...

"[a]n election is a process whose fairness is meant to engender confidence in a democratically selected government. When the purity of the process is compromised in part, the corruption affects the integrity of the whole."

US v Slone, F6th No. 03-6427 (2005)
